

VISION-SERIES CAMERAS

EVF-WiFi & Lynx ViewFinder App

A free phone app for Vision-Series cameras with the wireless EVF upgrade. It puts the camera's live align-mode image on your phone, so you can stand at the camera and align it without a laptop or HDMI monitor.

01 Is Your Camera Compatible?

The app needs a camera with the wireless Electronic ViewFinder (5LEVF). These cameras have **“EVF” on the bottom label** and a small USB dongle on the back.

Vision

Available as the 5LEVF upgrade

Serial ends 420 or higher

Vision PRO

Available as the 5LEVF upgrade

Serial ends 410 or higher

Vision PRO X

Included as standard

Check the label. Flip the camera over and read the last three digits of the serial number. The hardware revision determines whether the camera is wireless-compatible. Every Vision-Series camera still supports the wired HDMI EVF method, with earlier revisions supporting HDMI only.

02 Get the App

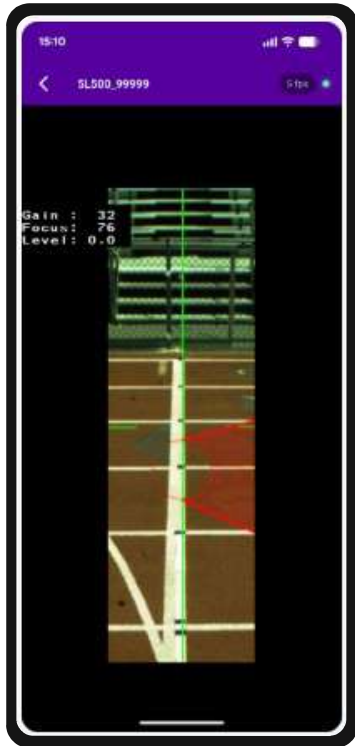

Lynx ViewFinder is free on Google Play and the Apple App Store. Search for “Lynx ViewFinder” and install it. No account or sign-in needed.

03 Connect and View

- 1 Enable the EVF on the camera**
 Power on your Vision-Series camera. In FinishLynx, turn on alignment mode and check the **EVF** box. Or, at the camera, press the button marked **A**, which checks the box and starts alignment at the same time. The camera then broadcasts its own WiFi network.
- 2 Join the camera's network**
 On your phone, open WiFi settings and connect to the camera's network. The network name starts with “SL”, for example **5L500_99999**, where the digits are the camera's serial number. The app also walks you through this step on Android and iOS.
- 3 Watch the live image**
 Open Lynx ViewFinder. The camera's align-mode image appears in real time, along with the Gain, Focus, and Level readout. Adjust the camera and the image updates as you go. Pressing the **A** button on the back of the camera toggles through the alignment modes and zoom levels.

04 What You'll See in the App

Once your phone is on the camera's WiFi network and Lynx ViewFinder is open, the live align-mode image fills the screen. The overlay carries the readings you need to line the camera up.

Camera name / WiFi network

Shown in the top bar, for example 5L500_99999.

Gain, Focus, and Level readout

Overlaid on the image so you can fine-tune the camera and lens.

Align-mode image

The live view of the camera, just like you would see in FinishLynx.

05 Notes

Direct connection

The phone connects straight to the camera. No internet or cellular signal is needed.

No account needed

There is nothing to sign up for, and the app carries no ads.

Automatic reconnect

The app reconnects on its own if the signal drops.

Location permission

The app may ask for location. This is required for WiFi scanning. The app never reads or transmits your location.
